A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

The price of anything is the amount of life you exchange for it.

-H. D. Thoreau

Even just a few minutes at work can help turn bad habits into good ones.

Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

Massaging Animals

Pampering your companions

Karrie Osborn

Animal massage has grown considerably in the United States since its emergence within the horse community in the 1960s and 1970s. It was on the racetracks and in the stables that famed sports massage therapist Jack Meagher and others like Linda Tellington-Jones helped massage become a valuable component of equestrian care, while also unveiling the hands-on work to a broader animal advocate population. The field has evolved significantly since that time, with animal therapists now offering everything from acupressure to energy work to hydrotherapy.

Despite their place in ancient Greek and Arabic equestrian traditions, animal therapies continue to fight for a place in the massage community today. Still, a growing number of massage and bodywork practitioners are working with animals, big and small, in everything from zoos to living rooms around the world.

The legitimacy human massage has

earned over the last decade has no doubt been a boon for animal massage as well. "People have started to understand that massage can help their animals in so many ways," says Barbara Maciejewski, who became involved with the animal massage program at the Boulder College of Massage Therapy (BCMT) in 2003. "There's great acceptance--word is out there now."

Just as education is key to creating a knowledgeable human client base, a critical component for making animal massage successful is educating people why it's important. "As a society, we still view companion animals as lesser beings," says Skya Fisher, owner of Cat Paws Massage in Bellingham, Washington. "We breed them for characteristics that we think are cute. Simultaneously, we ignore their emotional, social, and sometimes physical needs."

In truth, Fisher says, animals benefit from massage therapy the same way humans do.

Animals benefit just like humans.

Nuts Help Control Diabetes

The Benefits of a Healthier Diet

If you're a diabetic, or are otherwise concerned about your glucose levels, a new study has some potentially life-saving news for you. Researchers have found that replacing carbohydrates with just two ounces of nuts on a daily basis significantly improved glycemic control and reduced LDL cholesterol for patients with type 2 diabetes.

The study was published in the August issue of *Diabetes Care* and features the work of David Jenkins, MD, PhD, DSc, who says that, "Nuts, including peanuts, can make a valuable contribution to the diabetic diet by displacing high glycemic index carbohydrates and replacing them with vegetable fats and vegetable proteins which have been shown in the long term to be associated with better cardiovascular health and diabetes prevention."

Why so good?

One of the qualities of nuts that the study gives as a potential cause of this benefit is that they are a source of mono- and polyunsaturated oils--fatty acids that are healthier than saturated fats. In addition, they report that the high amount of protein found in nuts helps reduce hunger by increasing the length of time that one feels full.

Making the change

One thing to consider when seeking to implement this change in your diet is the increasing prevalence of peanut and other tree nut allergies. A 1999 study by the National Institute of Health (NIH) estimated that approximately 1.1 percent of the population, or some 3 million Americans, are affected by this allergy, which can cause hives, throat tightness,

wheezing, vomiting, and other serious side effects.

On the other hand, the NIH reports that over 18 million Americans have been diagnosed with diabetes and estimates that there are an additional 7 million who have not been diagnosed. If consuming two ounces of nuts a day can significantly improve aspects of this condition, which is associated with blindness, heart disease, kidney failure, limb amputation, stroke, and death, it would appear to be a smart move to make.

*Tension is who
you think you
should be.*

*Relaxation is
who you are.*
