## Is Your Vision Causing Muscle Tension?

Mary Betts Sinclair

Do you have tension headaches or chronic tension in your upper body? How about neck and shoulder stiffness? Maybe you experience strain in the temples, forehead, neck, shoulders, or back, especially after a long period of working at a computer or reading a book? If so, your tension could be related to how you look at the world.

Healthy vision is comfortable, efficient, and relaxed for the viewer, while poor visual habits can interfere with free and easy movement, making the body chronically tense. We use our eyes much of the day, and if we strain to see, we create tension in the face, neck, shoulders, and back muscles. Squinting and straining when we have trouble

few years of life. A lazy eye, for example, may cause a child to hike up one eye or one shoulder, or twist the neck to look out of the better-sighted eye at all times. Being sensitive to light might cause a child to develop the habit of hanging the head forward. Injuries to or near the eyes can also cause chronic tension in the muscles of the eyes or structures near the eyes. And finally, emotional stress can cause us to hold our muscles tight while we look out at the world.

### What To Do

#### STEP ONE

Talk with your massage therapist about your pain and strain. During a session, your therapist can check you for extra

Poor visual habits can interfere with free and easy movement

making something out, or stiffening our entire neck, spine, and pelvis every time we look up can affect the entire body.

Most of us develop these vision habits without even being aware of them, but there are other health factors that can play a role. Up to 5 percent of children are born with some kind of visual abnormality, or develop one in the first

tension in and around the eyes, neck, and shoulders, then fine-tune massage techniques to help relieve your discomfort. Relaxation exercises, as well as hot and cold packs, can offer additional relief.

**Be Immune to Inactivity**

Continued from page 1

Do daily eye muscle stretches, practice self-massage, and use hot and cold packs over your eyes. Your massage therapist can show you how to use these easy, inexpensive aids.

#### STEP THREE

Your bodyworker may also refer you to another health-care professional who can help you reduce built-up tension. For example, a behavioral optometrist can check to make sure your glasses are the right prescription and help you learn better visual habits; a Feldenkrais practitioner can help you change old habits, see with less strain, and understand how emotional stress might be affecting your eyes; and an ergonomic expert can help adapt your office workstation so that it protects and does not strain your eyes.

## Relief for Computer Users

According to the American Optometric Association, 46 percent of Americans spend at least 5 hours a day on a computer or smartphone. When looking at a screen, many people hold their head forward of center and slouch, which puts many upper-body muscles in a shortened position. These visual habits are now creating whole-body strain. In addition to head-forward posture, prolonged twisting of the head can tighten muscles in the back of the neck. At the computer, the greater the glare, the smaller the font size, and the poorer the resolution, the more likely it is that the person will strain to see and develop tightness in the upper shoulders.

Here are some ways to avoid pain and strain:

Computer users tend to blink very little and stare straight ahead, not using their peripheral vision. Be sure to keep blinking, which washes your eyes in naturally therapeutic tears and breaks up your stare.

Take frequent rest breaks using the 20-20 Rule: every 20 minutes, spend 20 seconds looking at something far away, preferably gazing out a window. Also, stand up and move as much as possible. This is a great time to do eye-muscle stretches and range-of-motion exercises for your back and neck. Use your fingertips to gently massage around your eyes, temples, and

forehead. Finally, rub your palms together and gently cup your closed eyes. Relax and breathe freely.

Make sure you have good light, and check that your monitor is the correct distance away from your eyes and at the right height. Also, adjust the screen settings to where they are comfortable in terms of resolution and flicker.

If you wear eyeglasses, have them checked. For example, in order for some people to see clearly with their heads held in an upright and balanced position, without chronic tightness in the back of the neck, they may need to have a prescription for a longer focal length or larger bifocal inserts, or have an adjustment of their eyeglass frames if they are bent or twisted. Some people may need a stronger or weaker prescription. If your doctor has prescribed a pair of glasses specifically

for seeing the computer screen, wear them.

# Healthy Holidays

## Five Tips for the Natural Traveler

Planning a vacation or business trip? Consider packing a small kit of natural remedies before you go. Unfamiliar surroundings, unusual foods, and jet lag can make you vulnerable to viruses, stress, and gastrointestinal (GI) upset. Colorado Naturopathic Physician Michael Sutton suggests the following items:

### 1. GRAPEFRUIT SEED EXTRACT

This extract fights and prevents viruses and helps reduce symptoms of diarrhea and GI upset. It can even be used to decontaminate water (4-5 drops extract per quart of water). A few days before you leave, mix 4-5 drops with juice or water and drink it before bedtime, and continue for the duration of your trip. If you do catch a cold or flu, you can drink as much as 8-10 drops, 3-4 times a day.

### 2. AIRBORNE

Available in natural products stores, Airborne is an effervescent tablet containing herbs, antioxidants, vitamin

C, and amino acids. It helps prevent and fight colds, as well as motion sickness, when traveling.

### 3. MELATONIN

To ease jet lag, Sutton suggests leaving your watch set for the time zone from which you're departing. When your watch shows your normal bedtime, take 3-6mg of melatonin, then go to sleep to regulate yourself quickly and easily to the new time zone.

### 4. BACH FLOWER RESCUE REMEDY

To calm nerves and reduce anxiety, place a few drops of this remedy under your tongue when you're feeling anxious, or add 5-6 drops to your water bottle and drink throughout the day.

### 5. WATER

H<sub>2</sub>O is essential to healthy travel. Drink lots of water and avoid alcohol, as dehydration is a major cause of travel-related illness.

By packing a few natural remedies and

paying attention to your body's needs, you'll be able to fully enjoy your trip.

Staying healthy is key to a good vacation.

# Be Immune to Inactivity

The World Health Organization has called inactivity the second-leading risk factor for non-communicable diseases and the fourth-leading risk factor for global mortality.

In the United States, inactivity has helped contribute to the fact that 35.9 percent of adults age 20 years and over are obese, as well as 18 percent of adolescents and children ages 6-19.

With risk factors like high blood pressure, high cholesterol, coronary artery disease, stroke, type 2 diabetes, and more, it's important to make sure you get enough exercise and activity to stay healthy.

Here are some tips to help you keep moving.

## Be Aerobic Every Day

The Centers for Disease Control (CDC) recommends getting 2.5 hours of moderate-intensity aerobic exercise each week. If you break it down, that's just over 20 minutes a day of activities like walking, water aerobics, riding a bike, or pushing a lawnmower.

Want to cut that down even further? If you bump the exercise up to vigorous intensity, you can cut the time in half. Vigorous-intensity activities include jogging or running, swimming laps, and playing basketball or tennis.

## Add Muscle-Strengthening

Lifting weights, working with resistance bands, and doing body-weight resistance exercises, heavy yard work, or yoga are all considered by the CDC to be important muscle-strengthening

activities. The recommendation is to get this type of exercise at least twice a week to the point where your muscles are tired.

If you focus on setting realistic goals and getting just a bit of exercise each day, you'll be on your way to meeting the requirements in no time. Find exercises and activities that you enjoy doing, and it won't seem like such a burden. Plus, you'll feel great about reducing the risk factors associated with a sedentary lifestyle. So get a plan, get out there, and get moving!

# *Believe...in the Magic of the Season*

-Hallmark

Welcome to "MESSAGE U."

Today's Subject: A Brave New World - Pt 2: The New Face of Massage

As we look forward to the new year, communities will (again) begin to re-open, and the landscape for massage will look different. New protocols, implemented to keep all of us safe, are:

\* Updates to Health/Consent Forms relating to COVID-19

\* Use of No-Touch Thermal screening

\* Use of Face Masks/Hand Sanitizer

Please continue with your mental and physical well-being at home and work and stay safe. I look forward to seeing you soon! HAPPY HOLIDAYS!

Note: The preceding information is not medical advice. Please check with your doctor prior to starting any new health, exercise or nutrition plan - especially if currently under a doctor's care or if you have any pre-existing medical condition(s).
